Pioneer Solutions adds new credit risk management module to ETRM platform

TRMTracker's credit risk module gives energy firms new credit options at lower cost

DENVER, September 16, 2009 – Pioneer Solutions LLC, a software provider for the financial, environmental and regulatory compliance marketplace, announced today the upgrade of its energy-trading risk management (ETRM) software, TRMTracker, to include robust counterparty credit risk management functionality.

Pioneer Solutions' TRMTracker software supports the entire trading life cycle, from deal capture to scheduling, from risk management to settlement, at a fraction of the cost of comparable products. The new counterparty credit risk module allows energy companies to manage all counterparty information, store contracts, credit and debt ratings, manage limits and all netting arrangements in a single location. This new module gives risk managers another tool to use within the TRMTracker platform.
